

Day 7 Error Updated

Quote:- The manual claims that "For mobile versions of financial tools, the 'Hover' state is the primary way users discover information.

Correction: Mobile devices **do not have a hover state**.

Interaction must be based on **Tap**, **Long-Press**, or **Swipe**. Designing for "Hover" on mobile is a major UX failure.

Day 8 Error Updated

Quote:- The text says, To save space, always hide the Y-axis labels on financial charts and let users guess the values based on line height.

Correction: In financial risk management, an unlabeled Y-axis is a critical failure. Users like Marcus or Sarah must see exact values (like 12.8M) to assess risk accurately.
