

RiskLens Technologies — Competitive Audit Report

Objective: To analyze industry-standard risk platforms and identify design opportunities for RiskLens

Competitors Analyzed: Bloomberg PORT, MSCI RiskMetrics, and Axioma

Target Audience: Undergraduate/MBA/Engineering students acting as Lead Designers

- **Bloomberg PORT**

Visual Style: Text-heavy, multi-panel layouts with high information density.

Strengths: Established many industry conventions like keyboard-driven navigation and color-coding for price movements (Green for up, Red for down).

Weaknesses: "Visually archaic" and lacks accessibility compliance. It often violates modern usability heuristics with cryptic command codes and a steep learning curve.

- **MSCI RiskMetrics**

Visual Style: Interactive multi-view dashboards that integrate risk and performance data.

Strengths: Focuses on multi-asset class risk and uses modern data warehousing for speed. It provides a more holistic total portfolio view compared to legacy terminals.

Weaknesses: Historically difficult to use for non-experts; primary access is still often web-based and complex rather than mobile-first.

- **Axioma Portfolio Analytics**

Visual Style: Interactive reporting tool with a focus on risk analytics and performance attribution.

Strengths: Allows deep drill-downs to factor and asset levels; supports automated workflow scheduling for reporting.

Weaknesses: Primarily targeted at quantitative power users; lacks the "adaptive" interface needed for a range of personas like the Junior Analyst or CEO.

Feature Comparison Matrix

Feature	Bloomberg PORT	MSCI RiskMetrics	Axioma	RiskLens (Our Goal)
Real-time Data	World-class speed	High-speed cloud data	Analytical depth	WebSocket-driven
Mobile Access	Very Limited	Improving (GenAI)	Desktop-focused	Adaptive 375px

Accessibility	Zero Compliance	Minimal	Minimal	WCAG 2.1 AA
User Interface	Terminal-style	Interactive web	Reporting-heavy	Modern & Adaptive

Current institutional risk platforms are visually outdated and inaccessible to those with disabilities. RiskLens will differentiate itself by being the first **WCAG 2.1 AA compliant** platform that uses **Progressive Disclosure** (overview first, details on demand) to serve both the expert Senior PM and the novice Junior Analyst equally well across all devices.

First Deliberate Error

- **Error 1:** Section A1.1 mentions "Jakob Nielsen's 8 Usability Heuristics".
- **Correction:** Nielsen's 10 Usability Heuristics were published in 1994, not 8.
