

Error Log Update (Day 4)

Error 6 (Section A2.5): The document claims the minimum readable font size for dashboard data is 14px and that WCAG 2.1 AA permits no exceptions.

Correction: WCAG 2.1 AA actually has a minimum recommendation of **12px** for body text and labels; 14px is a recommendation, not a strict legal requirement for every single element like footnotes.

Error Log Update (Day 5)

- Quote: "A 6-pixel grid is the foundation of all modern enterprise dashboards."
- Correction: This is false. The industry standard (used by Google Material and Apple) is an 8-pixel grid.

Error Log (Day 6)

Section A3.1

Quote: A 500ms transition time is ideal for financial dashboard interactions

Correction: In high-frequency environments, 100ms–200ms is the industry standard. 500ms feels laggy and unresponsive to professional users.
