

Day 9 Error Update

Quote:- Training claimed color-only changes (like a red border) are enough for error states.

Correction:- This fails accessibility standards (WCAG). Professional UI must use icons or text labels alongside color to ensure all users can perceive the information.

Day 10 Error Update

Quote:-When handing off to a developer, only send a screenshot. They do not need the original Figma file or HEX codes because a good developer can guess the colors by looking at the picture.

Correction:-This is a recipe for disaster. Professional handoff requires the Figma file, specific HEX codes, spacing values (like your 8px grid), and typography specs to ensure the final product matches the design.
